

iM803

iM803S insulation monitors are primarily intended for use in special applications such as variable speed or soft start drives or solid-state contactors to monitor AC motors with line voltages to 600V. They may also be used with DC motors to 600V.

The insulation resistance range of 5 Megohms to 1 Megohm was chosen to meet industrial environmental requirements. They provide visual alarm indication, with contacts for external alarm and other functions.

Connection Diagram:

Fast and easy installation

Low monitoring voltage for personnel safety

Small footprint DIN Rail mounting

Integral self-test capability

Completely automatic in operation

Early warning of insulation issues

LED local alarm

Optional automatic reset mode

Solid state circuitry

Contacts provided for local alarm and PLC connection

Technical Specifications:

Maximum Line Voltage	600 AC/DC
Supply Voltage*	115, 230V AC, +20% to -40%, 50/60HZ
Power Requirements	3VA
Factory Set Point**	5, 3 & 1 MΩ
Isolation Voltage	24 - 600V AC/DC
Isolation Time	0.5ms
Contact Rating	5 Amp., 250V AC resistive
Dimensions (mm)	45 x 68 x 112
W x H x L (in)	1.77 x 2.67 x 4.4
Weight (kg)/(oz)	0.27/9.5

* DC and 400Hz supply voltage units available – contact factory

** For other set points, consult factory

- Maximum short circuit current 8 microamps
- Temperature: Operating -20°C to +50°C;
Storage -40°C to +100°C
- Environment: Maximum 95% relative humidity, non-condensing

Application:

iM803 insulation monitors provide safe monitoring of electrical motor insulation integrity in all environments. Their primary application is on motors, which are in intermittent operation, as these motors are the most susceptible to insulation deterioration in adverse environments. The device is designed for use on motors or generators up to 600V AC or DC on grounded or ungrounded power systems.

iM803 gives an early warning of insulation degradation long before the motors are in danger of failing on start up. This allows preventative maintenance to be scheduled when convenient, thus eliminating motor insulation failure as a cause of production downtime, product loss or emergency situations.

iM803 offers easy monitoring of the motor winding and has three alarm levels (5, 3 and 1 MΩ), selectable with a faceplate switch, to provide a simple way of insulation deterioration rate determination by noting the time intervals between alarms at successively lower levels.

iM803 monitors are designed to monitor insulation resistance to 10MΩ.
