

## Simple, fail-safe and intuitive ...

When servicing electrical equipment, workers must comply with safety regulations that require a voltage verification test to validate the absence of voltage.

Traditional servicing of electrical equipment involves risk of injury from electrical hazards. I-Gard's **permanently mounted i-AVT** alleviates this risk by automating the testing process.

**Skip the risk - 18.3% of facilities experienced personal injury and 11.7% experienced interruptions of operations, while using hand-held voltage testers.**

## Contact us

Please call or email one of our many representatives who will be happy to assist you. Find your nearest representative or partner on [www.i-gard.com](http://www.i-gard.com) under contacts OR contact one of the following team members:
