

Simple, fail-safe and intuitive ...

When servicing electrical equipment, workers must comply with safety regulations that require a voltage verification test to validate the absence of voltage.

Traditional servicing of electrical equipment involves risk of injury from electrical hazards. I-Gard's permanently mounted **i-AVT** alleviates this risk by automating the testing process.

Skip the risk - **18.3% of facilities experienced personal injury and 11.7% experienced interruptions of operations**, while using hand-held voltage testers.
