

Simple, fail-safe and intuitive ...

When servicing electrical equipment, workers must comply with safety regulations that require a voltage verification test to validate the absence of voltage.

Traditional servicing of electrical equipment involves risk of injury from electrical hazards. I-Gard's **permanently mounted i-AVT** alleviates this risk by automating the testing process.

Skip the risk - 18.3% of facilities experienced personal injury and 11.7% experienced interruptions of operations, while using hand-held voltage testers.
